Requirements for use/ installation.....	2

Release Note – nowtice 2.84.2

Specific aspects of the released version

This release implements some improvements to the visual appearance of the Allerte Italia public portal in compliance with AGID guidelines.

Introduced improvement of API Services with introduction of OAuth2 authentication, completion of services and functionalities offered. Customers are informed to undertake the activities of upgrading their API authentication processes to the new protocol as the one currently adopted will soon be discontinued.

Introduction of a visual indication of ‘ready to send’ alert templates in order to identify those that are not complete with all the required information and therefore cannot be used for sending.

Application modules released with this version

With this release, the application modules shown in the table below have been updated:

Application Module	Description and Versioning of the Application Module	Update (Y/N)
Private	nowtice portal (https://portal2.nowtice.it): Private nowtice portal for use by operators.	Y
Public	Public alerts portal (https://publicalerts.nowtice.it): Public warning portal for use by web users.	Y
API	Integration API: Public integration APIs to be used by third parties for integration with the nowtice platform.	Y
IDP	IDP Regola Authentication Service rev. 1.105.0	N

New features or changes compared to the previous version

This release contains the following new features or changes compared to the previous version:

Application module	Internal ref.	Description of functionality or modification
Public	NOW-5516 NOW-5654 NOW-5696	Adaptation of portal visual appearance to AGID guidelines . Customisation of visual appearance of ‘Custom’ portals.
Public	NOW-5734	Defined the separation of links to the Privacy Policy documents of the Agency (Agency Ownership) and the Alerting Service (Regola Ownership).
API	NOW-5547	Updated the on-line documentation (swagger) in order to enable the simulation of the service call by providing input and displaying the resulting outcomes.
API	NOW-5557	Completed alert template management functionalities (ALL VERBS HTTPS)
API	NOW-5558	Completed tag management functionalities (ALL VERBS HTTPS)
API	NOW-5447	New authentication model based on the OAuth2 protocol introduced . The current authentication model (Basic Auth) will be discontinued shortly. <u>It is recommended to activate the procedures to migrate the Integration Services.</u>
API	NOW-5865	Introduced the possibility of calling up API Mass Alerts by specifying for certain Publication Points the parameters for activating the alert only on part of the configured recipients.
Private	NOW-5527	Introduced visual information on whether a warning template is ‘ready to send’ or missing mandatory data and therefore not directly usable to create warnings.

Private	NOW-5443	Introduced in lists and contact management section the possibility of filtering ALIAS without associated contacts.
Private	NOW-5127	Introduced the possibility of searching Lists and Contacts through Advanced Search : more performance with the precise indication of the filters to be applied

Solved problems list – Bug Fix

This release resolves the following problems reported to the technical assistance service or found internally in the development phases:

Application Module	Internal ref.	Description of the problem solved
Private	101267766890 NOW-5713	Improved import engine for lists and contacts when note fields contain the 'carriage return' character.
API	Many	General improvement and optimisation
Public	Many	General improvement and optimisation
Private	Many	General improvement and optimisation

Requirements for use/ installation

For the correct behavior of the platform the only requirement is a browser connected to the Internet. The suggested browser is Google Chrome from version 100. The use of the latest version is suggested. Other browsers may exhibit unexpected behavior.
